The CareCart stocks high frequency and disposable items within the nurse zone in the patient room. It provides a flexible work surface and storage system for staff. The mobile half can extend over the patient bed and provides compartments accessible from both sides. The CareCart allows immediate sharps disposal, storage of small supplies, and access to gloves and trash.

The stationary half of the CareCart is a storage unit for larger objects such as linens, trash bags, and cleaning supplies. It provides an additional work surface and acts as a dock for the mobile half.
