• The mobile CareCart work surface is 38" high, the proper height for most tasks, and telescopes to meet individual requirements.
• The stationary CareCart surface is 40" for light duty tasks. The CareCart is 16" deep, well within the average person's maximal reach envelope.

Ted, Xiaoyi, Michelle
The CareCart stocks high frequency and disposable items. It provides a flexible work surface and storage system for staff. This mobile work surface can extend over the patient bed and compartments are accessible bilaterally. The CareCart provides immediate sharps disposal, access to small supplies, and access to gloves and trash. The stationary CareCart is a storage unit for larger objects such as linens, trash bags, and cleaning supplies. It provides an additional work surface and acts as a dock for the mobile half.
